Particle Physicists”. Assisting today are [Gordon Duff](#) and Jeff Smith

Editor's note: Were these not cartoon characters and the entire story an allegory, were you to actually read this and grasp its intent, someone might actually have to shoot you.

We, of course, are kidding. No sane person would publish something this classified. Then again, why would basic laws of physics be classified. Doing so would derail human history on behalf of greed. That would be criminally insane.

The other day Dr. Wile E. Coyote and his trusted lab assistant Elmer Thud, both well known in the field of cartoon particle physics, decided that they were going to design and build a Neutron based Ray gun just like the one of Star Trek fame called the “phaser”. They were doing this so they could use it to eliminate there arch enemies Bugs Bunny and the Road Runner.

It also makes a great microwave oven for cooking your lunch. Dr. Coyote along with the help of his brilliant assistant and former rocket scientist Dr. Thud came up with the original idea of exciting a very small piece of fissile material.

Professor Coyote insisted that it be done with a very long but thin rod shape with a very high voltage produced by a miniaturized Marx generator while being placed in a tungsten carbide reaction chamber acting as a neutron reflector and tamper.

This produces a Low Energy Nuclear Reaction that could be focused in one direction.This can also be called a very small or portable directed energy weapon.

The two renowned particle physicists with many years of experience designing particle based weapons commonly known as Directed Energy Weapons for SANDIA and LooneyToon Cartoons realized that if they used the Townsend Electron Avalanche process to excite a low level neutron chain reaction in a fissile material, they could make a “Ray gun” or phaser; also known as a Dr. Judy Wood's Directed Energy Weapon.

This would not only exterminate their arch enemies Bugs Bunny and the Road Runner but it would also cook their dinner at the same time. Yum just ad some MSG and “Lunch”.

"I saw nothing!!"

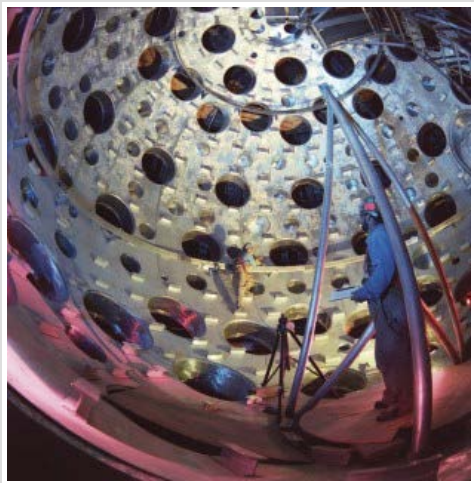

off of EBAY. Without two matched magnets to use in their particle accelerator their Neutron bombardment experiments would be no good. Despite this setback, they decided to go ahead with there scientific research into Very Low Energy Neutron Deflection. What they discover was worthy of a Nobel Prize in Physics.

But unfortunately for them they don't give out Nobel Prizes in physics to Cartoon characters even if they are renowned particle physicists that worked for Loony Tune Movies. Their discovery was simply astonishing.

They discovered that when they fired a low speed neutron beam at a very high intensity magnetic mono pole piece, that the Neutrons deflected away from the magnetic mono-pole no matter what polarity. They were dumbfounded, how could all of the physics books have got it so wrong?

Could it be that the Neutron was actually Diamagnetic and not Neutral. *(Editor's note: Our cartoon characters just eliminated that nasty Newtonian force once known as "gravity," that and a few other basic laws of physics that now seem to have been more "suggestions" or hypotheses backed by flawed math and falsified experimental data)*

Meaning that the structure of the atom was improperly being described as being held together by the mysterious strong and weak nuclear forces, or was it just simply equal amounts of magnetic attraction and repulsion of the orbiting electrons that held the nucleus of the atom together?

"I lost my pen. Have you see it anywhere?" ... "Are you kidding?"

When the mutual attraction of the Proton is in balance with the mutual repulsion of the Neutron their forces cancel being held together only by the magnetic field lines of the orbiting electrons.

If their discovery that the Neutron is dimagnetic and the Proton is paramagnetic then a simple Townsend Electron Discharge could blow apart an unstable fissile atom and trigger a low level nuclear reaction and that gravity is simple magnetic buoyancy. *(Editor's note: Yes, we just invented the weightless tennis shoe among other things)*

So there is no such thing as the weak force, the strong force or gravity to deal with. Every thing boils down to just simple magnetism? No Einstein needed here. *(Editor's note: Oh, unified field theory solved and nobody told)*

Wow this meant that their Ray Gun would actually work. All they needed was the fissile material to make it happen.

But when they tried to buy some Plutonium on EBAY they got busted by Homeland Security, saving Bugs

Bunny and the Road Runner from evil terrorists threatening to blow up the world.

(Thank goodness for that and for all the wasted human resources and effort, leading to so much money, all unnecessary in a world where gravity and with it, unlimited free energy were suppressed on behalf of "national security." ...We weren't here, we didn't write this, someone else did. "We know nothing.")

<http://www.cheniere.org/techpapers/Proof%20of%20a%20Mechanism%20for%20Cold%20Fusion.doc>

Tom Bearden told me about this mechanism for LENR (cold fusion) which is what I first thought this would be about when you wrote "Low Energy Nuclear Reaction". Anyway, the article points out

"In a transient fluctuation zone, reactions can and do run backwards. In 1999 the present author [i] noted that, in such a zone, the law of attraction and repulsion of charged particles could potentially be reversed, at least momentarily. This meant that, in a transient fluctuation zone, like charges could momentarily attract, because of the Coulomb barrier changing to a Coulomb attractor."

"In July 2002 Wang et al. [i] experimentally proved that such reversal zones can occur for cubic micron level and for up to two seconds. A cubic micron of water c... [See More](#)

David Gordon · ★ Top Commenter · Progenitor at Free State Agenda

The electric universe theory is one of many that refute classical, bad science. Good thing I never went further with physics - gives me less to relearn.

If we recalculate existence on electro-magnetic theory then, we as part of electro systems are only magnetized to the earth rather than beholden to an invisible, impossible to describe "gravity". Newton himself dabbled in aetheric theory until he went all mechanical. Look over Dewey Larson's Reciprocal Time Concept, factor in a geo-centric galaxy concept a la "daniel" and then look at <https://www.youtube.com/watch?v=rVT545WB8ml> to see what our "stars" might be.

Also add Gordon's last interview with the Nexus guy - in terms of being totally manipulated. Mix in the ever receding timeline of human civilizations. Add in that we couldn't make it to the moon with today's technology. And don't forget my own contribution - The moon in Color.

<http://youtu.be/nxX0eHm0oTY>.

You, if you are ever so slightly a thinking person, will say: What the F**K?!

Wieslaw Jan Syposz · Electronic engineering

yep, the electric and magnetic forces are much stronger than the gravity in small and large distances, unfortunately the cosmologists are mostly ignorant of the electromagnetism and do not consider that kind force in their evaluation of the universe...that's why they invented black holes and dark matter and energy, just poor science...

So Far From Heaven: Old Jules

Poor science is a bit pervasive in this brave new world, partly because it's funded by engineering intentions and private sector/defense grants encouraging specific findings and results. However, replacing smug, flawed, presumptuous academic science with bland suppositions and assertions not supportable by anything qualifying even as 'theory' won't fix it. Science is still science - method - observation, hypothesis or theory, testing, analysis, revise theory, testing, analysis, revise theory. Poor science is anything else calling itself science.

Around 1990, give or take a year, something happened at Maxwell Labs in San Diego. A controller board from one of our laser printers came back to my repair lab, also in San Diego. The component-level technicians who examined the board came to me in astonishment and said that every single component on the board was "fried", and that this never happened, it was always just one to three components that needed to be de-soldered and replaced. I asked my boss what happened there, and he replied that Maxwell wouldn't tell him anything at all about the circumstances, not a single word. Rumor later went around among the local tech community that somebody at Maxwell had slipped a digit when calculating the capacity needed in a certain Faraday cage,

Would it be too much of an exaggeration to say that the above article by Gordon is probably the most important few paragraphs posted anywhere about anything on the internet since, well, ever??!!

...I've spent half of today trying to wrap my head around the implications; especially when related to everything the guys at VT (as well as Rich Dolan, et al, of course) have been saying for years, now. Truly staggering stuff.

....And, I have a friend who (STILL) believes the official account of 911 – he says that governments can't keep secrets, as so many people knowing about something is impossible to keep a lid on! Yeah Right, nothing gets out when the enlightened ones consider the rest of us merely as something unpleasant stuck to the bottom

It's gotta be that image of what looks like a fusion reaction-plasma ball suspended in mid-air by some kind of lasar arrangement? Or else, suspended by some kind of gravity neutraliser, since the 'ball' would obviously be too hot to be contained within any man-made structure/material.

...So, a fusion reaction (low energy and minimum of fuss judging by the appearance) providing limitless amounts of free (relatively), clean energy and we are probably looking at a plasma ball equal in temperature to the inside of the sun?

...Awesome image – and the whole arrangement is only theoretically possible; at least it was back in my junior freshman Physics 101 class!

...Either the plasma-ball or those dudes looking like they are inside an even bigger

Xxellent Report Mr. Duff;;;

I always knew Coyote & the other named characters were Nobel worthy inventors. But who could've figured out all this physics engineering marvel but they.

Now;;; Since talking about cartoons came up here is also something funning which happened on the way to the moon by Apollo 11.

DISNEYLAND where most of these cartoons came from is at the southern edge of Los Angeles in the town of Anaheim (given to it by the German settlers in the 1800s).

JPL-NASA is in Pasadena (North East Los Angeles) & half hour from Disneyland.

I know a guy who told me this true story of something that happened on the way to the moon;;;

The guy has a friend who had been a professional photographer &

WFWard

September 14, 2014 - 7:43 pm

If we rethink physics in terms of magnetism versus “gravity”and toss out the old junk science it seems to make the works of Telsa and the Germans during the 30s make a great deal more sense. Then of course I have to ask VT for an article on the effects of the magnetic side of RF radiation waves we are constantly being bombarded with versus the effects of the electrical wave. What is it that is being beamed at us on that part of the wave? Science has notoriously under discussed the magnetic waves. If manipulation of our universal reality is as simple(relatively speaking of course) as this and other articles make it appear then we have indeed been lied to for a very long time. Nothing to see here, just another bunch of mushrooms.

Brilliant weaving of comedy and satire to describe deeply classified info Uncle Gordie. I've wondered for some time who Dr. Wood speaks for, or who her handlers are; I've asked Clay Douglas to ask you that question the next time you are on his program.

It is my suspicion that the Directed Energy Weapon “non thesis” (b/c she just asks questions and presents evidence...) is a “1-yard line” gate keeping effort, as the DEW platform would undoubtedly be of US origin. This provides the cover for the W54 war head black-mail fiasco of our greatest ally vs. the head of the Bush crime cabal.

[Log in to Reply](#)

Estipi

Regarding what you call “the W54 war head black-mail fiasco of our greatest ally vs. the head of the Bush crime cabal.”

Question for you and Gordon

Could it be that the Bush crime cabal planned 9/11 as being a Pentagon-only operation. And that they (including Bush himself) were actually surprised by the zio nuclear attack on Manhattan???

If so, then this is different from and more complex than just blackmail.

Of course the threat of doing it again (Samson option, etc.) IS itself nuclear blackmail.

ONMARK

September 14, 2014 - 5:54 pm

You use very slow moving Neutrons and Cadmium electrodes not Palladium.

In a LENR controlling Neutron velocity is the key. You use very low voltage and high pulsating current.

When neutron velocity is too slow it is a simple catalytic reaction. Higher it is a fission reaction even higher it

becomes fusion. So Jones cell will never work the way it was designed. Ask Bob Lazar he worked for Jones at Sandia in the Meson Lab. 1982-1987.

[Log in to Reply](#)

DaveE

September 14, 2014 - 7:27 pm

Neils Bohr called it "capture resonance." Too slow, nothing happens, too fast you get a dirty bomb, not very efficient.

[Log in to Reply](#)
